

# Proofers

# Proofers

- FMC FoodTech's solid understanding of product behavior in the proofing process and our extensive knowledge of climate controlled applications enables us to provide equipment that ensures perfect conditions
- The accuracy of our spiral proofers' temperature and humidity control technology guarantees highest product quality. Furthermore, the stainless steel environment ensures hygienic and reliable production over the years

# Control

- Temperature and humidity are accurately controlled in the entire product zone from start to end of the process and across the width of the belt. This ensures high and uniform
- Through a controlled airflow we can allow a high level of humidity, which helps to secure an optimal proofing result

# Benefits

- Controlled, reliable operation
- Easy maintenance
- Food technology know-how and support

# Proofing with GYRoCOMPACT® Spiral Proofer

- Built-in air process system for a superior, even, controlled distribution of air and humidity
- The design of our equipment is based on a solid understanding of the behavior of the product in the proofing process
- It features a continuous self-stacking conveyor, conveyor-drive system, humidifier, heating radiator, cooling coil, fan and enclosure
- Self-contained product zone ensures gentle handling and superior processing hygiene

# Proofing with the SuperTRAK<sup>®</sup> and LST<sup>®</sup> Proofer

- Taking up where others leave off, the SuperTRAK<sup>®</sup> and LST<sup>®</sup> spiral proofers handle large capacities with ease, particularly for products on paper and trays
- Wide belts, heavy belt loads and flexible layout configurations with twin drum options makes the structure supported SuperTRAK<sup>®</sup> and LST<sup>®</sup> spiral proofers leaders in their field
- FMC FoodTech has proven ability to pre-condition dough products prior to entry to a spiral, to eliminate sticking to any spiral belt – plastic or metal
